The energy-saving data of LOHAS series products have been examined and verified under the store's actual operation conditions.

※ As the most widely used open-type multi-deck cabinet for meat and fish, LH20CL-08 is proved to be capable of saving about 27% of the electric charge in comparison with all previous models. (Same saving rate is obtained when LOHAS series cabinets are compared to other makers' similar ones equipped with defrost heaters.)

※ In LOHAS series cabinets, all medium temperature ones are designed to use neither defrost heaters nor anti-sweat heaters. At the same time, the adoption of the new type air-curtain system (patented), which is an important technical innovation made by our company, efficiently prevents the ambient heat from entering into the cabinet.

※ As a matter of fact, the thoroughly improved energy-saving design for LOHAS series cabinets also allows the electric charge for their condensing units to be reduced by 9%. Each LH20CL-08 cabinet will save about 2000¥RMB of electric charge per year in comparison with the similar ones. This energy-saving effect, if being converted to CO₂ reduction rate, is equal to reducing annually two tons of CO₂ which may be otherwise discharged into the atmosphere. As their name hints, LOHAS series cabinets not only work very friendly to our earth environment, but also contribute a lot to the business operation of the supermarkets. For example, a supermarket equipped with 30 LOHAS series cabinets is capable of saving about 30000¥RMB of electric charge per year, which is equal to the money sufficient for buying a new cabinet. In consideration of its huge CO₂ reduction effect (each store reduces about 30 tons of CO₂ discharge per year), LOHAS series may well be called as the savior of the Earth.

※ LOHAS series products are not only characterized by their elegant appearance which is readily to match different styles of modern stores, but also well known for their superiority in energy-saving performance. All these advantages make the cabinet users regard LOHAS series as high ROI (Return on Investment) products, and order LOHAS cabinets in large quantities to equip their new stores. Nowadays, our company is in full swing manufacturing LOHAS cabinets to meet the needs of all these customers.

We hope you'll continue to favor your attention to our LOHAS cabinets in the future. In addition, for further improving the energy-saving effect of the cabinets and making them friendlier to the earth environment, we have also prepared for our customers a series of optional energy-saving components such as LED lamps, DC fan motors and slide glass for low temperature island cabinets. Detailed information will gladly be provided on request.
