

2011/5/9 The energy-saving data of LOHAS series products

Thank you very much for choosing our LOHAS series display cabinets.

Thank you very much for choosing our LOHAS series display cabinets. LOHAS series display cabinets are new generation ones specially developed by our company, and launched to the market in April 2010. The basic concept of LOHAS series is not only embodied in “Making display cabinets friendly to both human beings & environment”, but also in “Allowing customers to bring home all satisfaction accrued during their shopping process”.

Needless to say, as a new generation developed for helping the stores to save electric energy and raise business profit, LOHAS series cabinets are behaving extremely well in respect of their energy-saving performance. For example, an 8' LOHAS open-type multi-deck cabinet that adopts our company's innovative technology can, when the energy-saving effect of its condensing unit is included, save 27% of the electric energy in comparison with the cabinets of same specification supplied on the market.

(Electric charge of an 8' multi-deck cabinet = 7,500 Yuan RMB / year ~ 5,000 Yuan RMB / year
..... Namely, save 2,000 Yuan RMB each year)

2,000 Yuan RMB of electric charge will be saved each year.
